ESTIMATE WITH BATTERY TEST · 4-YEAR FORECAST

Volkswagen ID.4

Pro Performance

Valid as of	Certificate ID	Issued for
5 November 2026	SE-5KXC-4P07-1HYA-TZ6X	AutoVolt.ch

First registration	03.2021	Odometer	83'000 km	Age	5 years 7 months
Gross capacity	82.0 kWh	VIN	WVG••••••••••2883	Country	CH

Battery health

Share of usable capacity when new

92.4%

89.4–95.3%

SuperElectric estimate

Based on its age and mileage, adjusted for its battery test.

- ✓ **Battery test in line with our model**
- ✓ **Within battery warranty, by time and distance**

Likely range for this car

Usable capacity, estimated

71.1 kWh

68.8–73.4, of 77.0 when new

Battery warranty left

2.4 years

✓ Of 8 years, until 03.2029

Warranty km left

77'000 km

✓ Of 160'000 km

Typical battery warranty for ID.4 cars. Please verify with the seller.

Forecast 4 years on, after another 60'000 km

By November 2030, at about 143'000 km

88.4%

82.4–94.4%

Disclaimer

What does state of health mean?
The battery's usable capacity today, as a share of its capacity when new. It says nothing about the battery's mechanical or electrical condition.

Where do the figures come from?
From SuperElectric's machine learning model, trained on battery measurements from real cars. It calculates the expected state of health from what the seller provides: the car's model and variant, first registration and odometer. The certificate is only as accurate as that information.

What if the car has a battery test?
If the seller also provides a battery test from an independent provider, our model adapts to it for a more accurate estimate and forecast. The certificate lists the test with its provider, date and stated accuracy, and flags a test outside our model's range.

What does the range mean?
About 9 in 10 cars of this model, age and mileage fall within it. The figure in bold is the typical value.

How accurate is it?
The typical value is within ±4 percentage points of the measured state of health for at least 90% of cars under 7 years old, and within ±10 points for older cars.

What does the forecast assume?
The same use as today and 15'000 km a year, for 4 years or until the car is 10 years old. It is not a promise of future capacity.

Is the battery warranty the car's own?
No. It applies this model's typical battery warranty to the car's age and mileage. The actual terms depend on the manufacturer and the car's history, so verify them with the seller or manufacturer.

What can this certificate not tell me?
Whether any cell is faulty or damaged, whether the battery was repaired or replaced, or whether recalls are open. Only an inspection by a manufacturer's service centre or a qualified technician can establish that.

How do I check that this certificate is authentic?
Scan the QR code or type the address in the footer. Our page for this certificate ID shows its figures, valid as of the date on page 1, so you can compare them with this printout.

Who issues it?
SuperElectric, a brand of Interactive Foundry AG, Switzerland. Questions and corrections: contact@superelectric.app.

What is this certificate not?
A warranty, a valuation, or advice to buy. It shows only the VIN's first 3 and last 4 characters and holds no personal data.
